ABOUT US

Forewall Energy Limited "Forewall" is a multi - disciplinary group of companies focused and committed in meeting the needs of our client in terms of quality service delivery in the areas of oil and gas services, engineering construction, Man power development and supply, provision of facility services as well as logistics and procurement. Our expertise is holistic not only for subsequent procurement of

equipment and construction of any facility but also considering safety and utility as priorities. This ensures that when a project is completed, it will operate effectively throughout its lifespan.

Forewall has been able to make a distinction within the industry in the relatively short time we commenced operations. We have demonstrated excellence especially with regards our company culture, employee programs, company practices and overall business philosophy. We hold safe working conditions in high esteem especially not just for our employees, but also for our customers.

Our philosophy is to provide innovative, cost effective solutions, on time and within budget whilst we develop a relationship with our clients for mutual respect. Doing this places us first on the list when our clients consider new tasks or technologies as our dependable services have merited the trust our clients place in us.

Our team of competent, devoted and highly skilled personnel understand the demands of getting the job done as such come together to pull from their wealth of experience to solve our clients tasks in the shortest possible time. Our approach is always flexible. Whilst we prefer to be contracted directly with our main client, as this helps us to achieve the clients' goals, we do engage in sub-contract and/or consortium arrangements in order to draw synergy together in meeting our clients' requirements. We have a reputation in the industry for adhering strictly to specified and required international standards on project procurement and delivery regardless of the size of the project.

The Value of Our Company

Forewall is more than a "provider" of services; we apply our experience and knowledge to offer the best valued products and services to our clients in the context of long-term relationships, becoming a true collaborator with our clients. A testament of our values in integrity, honesty and respect in all our business dealings.

Our Services

Our reputation for exceptional technical expertise, cost competitiveness and service quality enables us to undertake a wide range of turn - key projects while providing stringent control over the quality, delivery, time and production costs demanded by our clients. Our services include;

Oil and Gas Logistics

Oil and Gas Services

Procurement and supply chain management

Facility Management Services

Technical Staffing and Man Power Supply

Civil Works

Engineering Designs and Fabrication

Oil and Gas Logistics

Our complete suite of integrated services allows our customers to enhance their logistical operational efficiency, control costs and increase revenue – driving towards long-term growth. Our logistics service is an unmatched combination of operational expertise, global reach and strategic focus. We help in Planning and management of logistics support services for offshore projects

Stand-by Vessel

AGS brokered PSVs, AHTS

In swamp locations, Forewall offers its clients a comprehensive suite of support services including; Crew transport, platform supply vessel, offshore accommodation, maintenance support, stand by safety services and anchor handling tugs, Vessel brokerage, chartering & leasing.

Our offshore fleet includes; Swamp barges, pusher tugs, crew boats, Platform Supply Vessels and accommodation module for crew comfort in swamp areas.

In land locations we help our clients get their goods to the desired locations directly. Our trucks are in two forms the containerised and the tarpaulin fully insured for safety of products. Our drivers are experienced and well trained in the services they render.

Oil and Gas Services

Forewall oil and gas services provides complete project and integrated maintenance services to the oil and gas industry. As an all-round contractor, Forewall has a wide experience in performing specialized offshore project maintenance services which include:

EVALUATION

Our extensive portfolio of conveyance systems, coupled with industry-qualified measurements, are being applied to open-hole and cased-hole wireline, slickline, LWD, well testing and geoscience services.

Cased-Hole Services
Conveyance
Data Services
Earthview
Geomechanics Services
Geoscience Services

Integrated Laboratory Services
LWD
Borehole Seismic Services
Open-Hole Services
Production and Produced Water Systems
Surface Logging Systems

INTERVENTION

Our intervention services help remediate wells that have mechanical or formation problems. We help prolong the life of these wells by providing systems to extend Production or access and to retrieve remaining or "stranded" oil and natural gas reserves. We offer services such as

Casing / Tubing Evaluation
Fishing Services
Heavy Duty Wireline
Multilateral Systems

Pipe Recovery
Production Logging
Thru-Tubing Packers
Thru-Tubing Fishing/Milling

Procurement and supply chain management

Forewall procurement services concerns the acquisition of goods and services. Forewall procurement policies and procedures are designed to ensure timely, efficient, and economic procurement, within the guidelines of good business practices. Unless stated otherwise, these policies and procedures will apply to all procurement actions irrespective of funding source and payment method. All purchases and procurements shall be reasonable and necessary.

Forewall Specialized oilfield equipment supply is an integral part of an optimized production, transmission, storage and distribution network.

As part of Forewall's commitment to quality and strategy to develop into an international oilfield supply house, Forewall is in partnership with many oil and gas equipment producing companies worldwide.

We have a wealth of experience in delivering procurement outsourcing programmes in the private and public sector, helping our clients to reduce their procurement costs on average by 8%-18% and in one-off instances in excess of 30%. Our procurement services practitioners have attained, or are working towards attaining Chartered Institute of Purchasing & Supply (CIPS) qualifications and are led by experienced procurement consultants and managers.

Forewall's Procurement strategy involves

- I. Verification of need
- II. Assessment of options
- III. Development of procurement strategy
- IV. Implementing procurement strategy
- V. Project delivery
- VI. Post project review

Facility Management and Services

The scope of oil and gas facility management support we provide include;

Complete plant operation

and maintenance management

Single source accountability

for all services

On site warehouse management

and routine maintenance

Our services include

Plant rehabilitation/ Corrosion control: This includes painting, sandblasting, coating and tank cleaning services

Scaffolding services

Inspection services

Inspection services

Non Destructive Testing (NDT) for flaw detection and evaluation, leak detection, location determination, dimension measurements, structural and microstructural characterization, estimation of mechanical and physical properties, stress and dynamic response measurement.

Ultrasonic Intelligent Pigging inspections to locate linear position of anomalies, external and internal metal loss anomalies, dents and their size, length and depth, wall thickness changes, length, width and burst pressure of metal loss anomalies. Our technicians provide feedback by selecting and prioritising pipeline sections that need repair. They then advise scheduled maintenance and inspection planning to ensure the long term safe operation of the pipeline. Results of the inspection are loaded into a database that can be referenced to calculate corrosion rate throughout your asset life cycle

Technical Staffing and Man Power Supply- training

Whether you require staff on a contract or full time basis, Forewall has the depth of experience to meet your needs. Once we grasp the skills required and the job at hand, we quickly and efficiently source suitable pre-screened candidates who can hit the ground running. We have a database of suitable candidates available with the required skills and we screen in accordance with the specification agreed with our client.

Our services address talent management at all levels, be it entry level, mid level or management level. We specialise in man power placement and support which cuts across the oil and gas industry value chain, through exploration, asset development- drilling and reservoir management, production, including the development of production facilities, refining, primary distribution and terminalling. We are able to supply multi discipline project teams cutting across all these area depending on the phase of the clients' project.

We guarantee rapid turnaround time from initial identification of clients specific search need to actual placement of contractors on the work site. Beyond hiring and placement of personnel, we provide cost effective support services such as accommodation and hoteling, immigration and consular services, travel and ticketing, transport and meet and greet services, medical registration and evaluation, administrative and other forms of logistic support which help to optimise the overall cost of personnel to client projects, helping them attain the critical resourcing balance on projects at the very best prices.

Site preparation, Civil Works and construction

Our site preparation services include

Land clearing including demolition and environmentally advanced recycling and disposal | Grading and earth work

Storm water drainage, retention ponds and erosion control

Consulting for site selection and site development

Site review, evaluation and testing

Site Pre-planning and planning including drawings for grading, storm water and erosion control, roads parking lots and complete earth works

Site preparation, Civil Works and construction

Forewall has successfully completed construction projects under incredible circumstances, in remote locations and in difficult environments worldwide. This experience in construction execution and construction management enables Forewall to undertake cost effective projects in the upstream, midstream and downstream sectors of the oil and gas industry, electric utility transmission and distribution. Our construction related services are offered as part of a full engineering, procurement, construction (EPC) project or can be employed as a standalone service, depending on client needs. Our range of construction services are as broad as the myriad of projects we have completed. With excellent equipment, knowledgeable oversight and the right people, we have an understanding of what it takes to complete a great job on time.

Our civil works portfolio includes, water treatment works, sewage treatment works, bridges, band walls construction and barriers supporting roads, construction of storm water and sewage pipelines, construction of concrete structures, culverts construction and fencing, road highway design, development infrastructure, fixed offshore platform, floating production facility, factories, workshops, warehouses, pipeline metering stations, pipeline construction, flow stations, tank farms, port jetties and power facilities

Road Construction: Forewall can assure successful construction of different types of roads ranging from trunk A, Trunk B and Trunk C as well as construction of access roads within different facilities like residential and industrial area by utilising the strength of our technical sound professionals. We are committed to excellence and competence irrespective of location or size of project.

By reason of a proper integration of highly skilled and trained manpower with recent cutting edge technologies, Forewall can guarantee excellent service delivery in highway designs, preparation of procurement, road safety planning and specification and feasibility studies.

Engineering Designs and Fabrication

Our expertise in engineering design and quality procedures demonstrates our unique background and special ability to add value to any engineering & design project in Nigeria with new technologies and best practices. Our engineering services include;

Process engineering design

Recertification and revalidation of valves and pressures vessels around flow stations and assets.

Rehabilitation of well head platforms across swamp assets for safe use

Oil and gas Engineering Consultancy Project

Engineering and Management quality assurance and audit maintenance management

Feasibility and specialist studies

Design project oversight

Project management

Civil structural engineering

QHSE POLICY

Quality. Health. Safety. Environment

At Forewall concern for safety is a core value. It is a constant consideration in the way we run our operations - not a priority that changes.

We promote a behaviour-based safety culture. Our focus on safety is also demonstrated in other ways. We ensure that all employees on board our operating units are provided with, and wear, personal safety equipment that exceeds statutory requirements.

Forewall is committed to conducting its activities in a safe and secure working environment that prevents harm, both to our personnel as well as contracted and third party persons working under the direction of our companies. Safety and security are top priorities. We focus on protecting our personnel, assets and operations. This is achieved through;

Management's active demonstration and commitment to safety and security

Promoting and driving a strong safety culture and creating a secure environment in which all employees share this commitment

Compliance with or exceeding applicable safety and security laws and regulations

Encouraging employees to freely report ways and means to improve our overall safety performance

Operating a "target zero" principle for unsafe acts and conditions, actively using lessons learned Measuring and benchmarking performance internally and externally, against market leaders

Systematic identification of risks and hazards against clear acceptance criteria
